Scantech-ID SG-15^{Plus} Terminal Status Request Bar Code

Product Update:

The Scantech-ID Shuttle^{+} Price Checker is a kind of black box -from the outside- where it concerns the primary network parameters.
In order to make Installation and Service easier, we have added the Terminal Status Request by Bar Code feature, with the ultimate goal to decrease the Total Cost of Ownership.

How does it work:

- Scanning this barcode at the Shuttle^{+} will show its status and configuration info.
- Scan multiple times to show several pages; 4 when WiFi-card placed, 3 for wired Ethernet.
- This feature is supported as of Shuttle Firmware version 3.07 January 12th 2010
- The contents of bar code is configurable through the webbrowser.
  Default value is EAN 13 with content 8712345910013
- The feature can be turned off if desired.
- This feature is read-only. For security reasons we have chosen not to make the internal SG-15 parameters bar code programmable.

In due course this information will be added to the regular Shuttle^{+} User's Manual.

Due to Scantech´s continuing product improvement programs, specifications and features are subject to change without notice.
