Betreft / Concerns: SG15 Software Development Support
Ref.: B130115

Dear Madam/Sir

Thank you for your interest in the Scantech-ID SG-15 Shuttle,
one of the most successful Scantech products in the market.

To get you up and running on the Shuttle Price Checker Integration,
you find attached a package with our initial guidance on:
- What it takes and
- All the tools which Scantech provides (for free!~!)

to get the SG-15 Shuttle connected to the Carrefour Store Database.

The mentioned 'Framework of Software Tools' you will find on this Support CD,
in directory: \Tools and Drivers\SG Ethernet Toolkit\Win or Linux.

In this Product Library you will find many source code examples in:
- generic C, C++, MFC and
- Visual Basic.

Please have look in the directory: Source Code Examples.

When you install this toolkit on your PC, you will find the full sources of the
application in directory: C:\Program Files\Scantech ID\SG_net\demo\source_doc.

If you like short-cuts: Export your existing article database in the format
and default location of SG_DB.txt and the job is done!
Obviously you need to refresh this file, after every price-update in the original article DB.
In case of further questions feel free to get back to me any time.

Kind regards,

Jacob Kroes
